By D. Zirangey
- 12 Thinking Sustainably: From Hobby Turtles to Honours Thesis
By D. Zirangey

From the Editor-in-Chief

Volume 4 of *PMUSER* brings a number of firsts, including our first-ever special issue. And I'm excited to share this Agriculture-themed special issue with you! Agriculture is a large and vital part of Manitoba's economy and so, with our focus on undergraduate research related to science throughout Manitoba, this is a meaningful first special issue.

Inside you'll find undergraduate student perspectives on research in agriculture, a photo feature of graduate students reflecting on the value of research, and a feature article on a beef cattle research program. Join me in flipping the page to recognize the students and their research featured within, and in eagerly awaiting the next special issue which, along with every issue *PMUSER* publishes, will continue to showcase students and their successes while we provide opportunities for authors, peer-reviewers, and editors.

Thanks for reading,

Matthew J. D. Doering
PMUSER Editor-in-Chief
